linkedin.com/in/sonu-rajendran

Data Analyst with professional experience in e-commerce analytics, returns & dispute management, stock management, BI dashboarding, and application development, backed by a postgraduate degree in Computer Science. Hands-on experience in Python, machine learning models, data preprocessing, ETL pipelines, and automation. Worked on ML classification models, OCR bots, AI-driven chatbots, and real-time data ingestion pipelines. Familiar with LLM workflows, RAG concepts, vector stores. Strong foundation in NumPy, Pandas, Scikit-learn, data modeling, API integration, and cloud deployment. Excellent at building prototypes, solving analytical problems, and delivering data-driven solutions.

EDUCATION

SIES College of Arts, Science

- Master of Computer Science
- CGPA - 8.4/10

SIES College of Arts, Science

- Bachelor of Computer Science
- GPA: 8.6 / 10

SKILLS

- Data & BI:** SQL (T-SQL, Stored Procedures, Views), Pivot Tables Power BI (DAX, Power Query), Tableau, Advanced Excel (VBA/Macros, VLookup)
- Data Engineering:** ETL pipelines, Python (pandas, NumPy), Data Modeling, Multi-platform SKU Harmonization
- Machine learning:** Classification Models, Train-Test splits, Model Evaluation (Accuracy, ROC-AUC)
- Cloud platforms:** AWS (EC2, S3), Azure fundamentals (knowledge of Azure Storage and App Service), Netlify, Vercel
- Microsoft Office 365 (Excel, PPT, Word)
- Blockchain fundamentals
- Data Visualization, Cleaning, Transformation Pipeline
- Inventory stock Analysis and Forecasting
- Machine Learning Algorithms
- Flutter, Html, CSS, GitHub and version Control

CERTIFICATIONS

- NPTEL Python for Data Science
- AWS Fundamentals
- Google Cloud Data Analytics
- Data Visualization with Power BI
- SQL for Data Science (Coursera)
- Kaggle Micro-Certifications
- Google Data Analytics Professional Certificate (Coursera)
- Postman API Fundamentals Student Expert
- SQL (HackerRank / Coursera Verified Intermediate Certificate)
- Blockchain Basics — Coursera

WORK EXPERIENCE

Sounce Retail Pvt LTD Data Analyst | Data Platform Developer

FEB 2025 - PRESENT

- Internal Management System Development:** Designed and developed a role-based internal management system using Node.js, Express, and React, connected to a SQL Server backend for data integrity and scalability. Implemented JWT-based authentication and access control layers so each department could securely manage only their module.
- Integrated Power BI Embedded APIs within the React frontend to deliver real-time analytics dashboards directly inside the portal.
- Deployed the system on AWS EC2 ensuring 99% uptime and scalable architecture for internal users.
- Built and implemented various python bots to extract accurate data from the platform pages also built a python bot which could automatically create folders and photos which significantly reduced the manual intervention and time required to get the documents ready for returns dispute raising.
- Automation, Bots:** Automated dispute and returns processing by building a Python + Tesseract OCR bot, reducing manual intervention by 65%.
- Built web scraping bots with python + playwright to extract product, pricing, and stock data from e-commerce sites in real time
- Power BI Dashboard & Data Visualization Architecture:** Architected and developed enterprise-level Power BI dashboards to visualize multi-platform e-commerce performance (Amazon, Flipkart, JioMart, Blinkit, Shopify, Cred, Zepto).
- Created interactive reports for top-performing and low-performing SKUs, stock forecasting, and sales trend analysis—enabling real-time insights for management. Also engineered data models with DAX measures and Power Query transformations to ensure accurate KPIs and seamless cross-platform analytics.
- Central Data Warehouse & ETL Development:** Built a SQL Server data warehouse as a single source of truth for the company's multi-platform e-commerce operations.
- Developed automated Python ETL pipelines using pandas, SQLAlchemy, and schedule to fetch, clean, transform, and load daily data from all sales channels.
- Built ML models (classification & prediction) using Scikit-learn with full pipeline: preprocessing → training → evaluation.

Artificial Intelligence Intern – Infotech

JULY 2024 - SEPTEMBER 2024

- Applied Python, pandas, NumPy, and scikit-learn to build and evaluate machine-learning models for predictive analytics.
- Developed an AI chatbot using Python + NLP + OpenAI API for automated customer query handling.

Web Development Intern – Unified Mentor Pvt Ltd

JANUARY 2024 - FEB 2024

- Built responsive React.js web applications (Music Player, Weather App) using HTML5, CSS3, JavaScript, improving page load times and UI responsiveness also implemented REST API calls to fetch live weather data and dynamic content.
- Strengthened fundamentals in version control (Git) and cross-browser compatibility testing.

PROJECTS

- Data Analytics & Visualization, Power BI** - Full scale company sales visualization for multiple platforms. Performed data cleaning, transformation, and modeling for unified reporting and designed interactive dashboards for leadership to track top-performing and underperforming products.
- Amazon Product Data Scraper (Python, Playwright):** Built a scalable automation tool to scrape Amazon product data using ASINs, extracting availability, price, star ratings, and review counts with batch processing, Excel-based reporting.
- Enterprise Management Portal (MERN + SQL + Power BI Embedded)** – Secure ERP-style application integrating analytics.
- AI-Powered Customer Support Chatbot (Node.js + OpenAI API)** – Developed a Python/Node.js chatbot using OpenAI API with conversation logging and response automation.
- Machine Learning Projects: Heart Stroke Prediction:** Model Built multiple ML classifiers (Random Forest, Logistic Regression, KNN, SVM) with preprocessing, feature selection, and evaluation metrics.
- Skin Cancer Cell Image Classification** — Worked with image datasets, applied ML techniques and preprocessing to classify cancerous vs. non-cancerous cells.
