Education

- Scaler**
 - Specialization in Data Science and Machine Learning
- PES Modern College of Engineering, Pune**
 - B.E. (Computer Science)
 - CGPA : 9.12

SKILLS

- Programming & Automation:** Python (Pandas, NumPy, Web Scraping), VBA Macros, Automation Scripts
- Database & Querying:** SQL (Joins, Aggregations, Stored Procedures), Data Cleaning & Consolidation
- Data Analysis & Visualization:** Excel (Pivot Tables, VLOOKUP, INDEX-MATCH), Power BI, Tableau, KPI Dashboards
- Machine Learning & Analytics:** Predictive Analytics, Regression Models, Inventory Forecasting
- E-Commerce Platforms:** Amazon Vendor Central, Flipkart, Shopify, JioMart, Blinkit, Swiggy

CERTIFICATIONS

- Core Java from Fuel Organization
- Nptel Python for Data Science
- Nptel Natural Language Processing
- SQL from Scaler Organization

PROFILE

Data Analyst with 11 months of professional experience in e-commerce analytics, inventory management, and product performance tracking across multiple online platforms including Amazon, Flipkart, JioMart, Blinkit, Swiggy, and Shopify. Skilled in Python automation, SQL, Excel macros, and data visualization using Power BI and Tableau. Experienced in building dashboards for stock forecasting, product performance, margin verification, and suppression analytics. Adept at designing ETL pipelines, automating repetitive processes, and integrating multi-platform datasets to drive actionable insights.

WORK EXPERIENCE

- Source Retail Pvt LTD** DEC 2024 - PRESENT
 - Data Analyst | E-Commerce Platform Analyst
 - Managed end-to-end product data operations across Amazon, Flipkart, Swiggy, and Zepto.
 - Developed and automated Daily Run Rate (DRR) calculations using advanced Excel macros and VBA, reducing manual data processing by 85% and enhancing accuracy in inventory forecasting, trend analysis, and data accuracy.
 - Performed price and margin validation across multiple platforms, identifying discrepancies and correcting them to maintain profit margins.
 - Conducted product suppression analysis, generating detailed reports for internal stakeholders.
 - Designed and implemented Power BI & Tableau dashboards to visualize:
 - Stock availability and DRR trends
 - Product status and suppression metrics
 - Multi-platform pricing and margin comparisons
 - SKU-level sales and inventory forecasts
 - Integrated SQL databases to consolidate multi-platform data for analytics, reporting, and visualization.
 - Applied predictive analytics and regression modeling to forecast stock depletion and reorder requirements.
 - Streamlined purchase order recommendations using automated DRR and inventory alerts, minimizing stockouts and overstock risks.
- AWS Cloud Foundation** OCT 2021 - JAN 2022
 - Virtual Internship
 - Gained hands-on experience in cloud computing fundamentals using Amazon Web Services (AWS), including cloud infrastructure, core AWS services, pricing models, and security features, developing a practical understanding of scalable and on-demand cloud solutions.

PROJECTS

- Multi-Platform Product Performance Dashboard**
 - Built Python bots for real-time data extraction across Amazon, Flipkart, Shopify.
 - Created interactive Power BI dashboard tracking live products, suppressed items, price deviations, and margins.
- Inventory Forecasting & DRR Automation**
 - Automated DRR calculation in Excel with macros, reducing manual effort by 80%.
 - Predicted stock depletion and generated automated PO recommendations using SQL and Python analytics.
- Price & Margin Analytics Project**
 - Developed a system to track listed vs. live prices, highlighting negative margin products.
 - Built Tableau dashboards with KPIs for finance and operations teams.
- Inventory Management System using SQL**
 - Developed an Inventory Management System to manage product stock, suppliers, and purchase orders.
 - Implemented SQL queries for stock tracking, low inventory alerts, and monthly sales reports.
- E-Commerce Sales Dashboard using Power BI**
 - Created an interactive sales dashboard to analyze product performance, customer trends, and revenue growth. Used Python (Pandas, Matplotlib, Seaborn) to visualize sales data from an e-commerce platform.
 - Enabled data-driven decisions by highlighting patterns and anomalies in sales.
- Product Landing Page using HTML, CSS**
 - Designed and developed a responsive landing page for a bakery brand, improving visual presentation and user experience.
- Target SQL Case Study using SQL**
 - Analyzed multiple database tables to uncover insights into Target's operations in Brazil using joins, aggregations, and data querying techniques.
