

Sonu Rajendran - Portfolio PRD

Product Requirements Document

Sonu Rajendran — Personal Portfolio Website

Version: 1.0 **Owner:** Sonu Rajendran **Status:** Draft — Foundation + Design Direction

1. Purpose & Objective

Sonu’s resume is intentionally narrow — tailored to Data Analyst / BI roles. The portfolio website exists to show the **full range** behind that resume: analytics depth, plus real engineering, automation, and application-development work that the resume can’t fit.

The site must never read as “just a Data Analyst site.” It should read as a **Data & Technology professional** who happens to be strongest in analytics, but who ships real systems end-to-end — dashboards, pipelines, apps, and automation.

Core question the site answers: > **“What can this person actually build?”** — not just “what jobs has this person held?”

2. Positioning Statement

A Data & Technology professional working across **Analytics, Data Engineering, Automation, and Application Development** — turning messy business problems into dashboards, pipelines, and production systems.

Depth: SQL, Power BI, Excel, Tableau, Python, data modeling, BI.
Breadth: ETL, Spark, PostgreSQL, AWS, Docker/Kubernetes, Flutter/Spring Boot, web scraping, AI-assisted workflows.

Content is always organized by **honesty of claim**, not hype:

Tier	Meaning	Example
Professional Experience	Paid, production work	Contract Intelligence Dashboard (Innomotics)
Project Experience	Self-built, complete, real data	AWS Redshift ETL, PostgreSQL Data Modeling
Hands-on Practice	Exercises / structured learning	19 advanced SQL command exercises
Technical Exposure	Familiarity, not fluency	Snowflake, Azure Fundamentals

3. Target Roles the Site Must Stay Relevant To

Primary: Data Analyst · BI Analyst · BI Developer · Analytics Engineer
Secondary: Data Engineer · Python/Data Engineer · ETL Developer · Cloud/Data Platform Engineer
Additional: Python Developer · Automation Developer · Application Developer · Technical Analyst · AI/Automation roles

The site must never force all of this into one generic “Skills” wall — it’s demonstrated through **projects**, grouped by category, not a giant tag cloud.

4. Design Direction (from reference screenshots)

Two references were provided. We take **palette and content-block patterns from the blue-orange portfolio template** (primary direction) and **layout/typography discipline from the “Montgomery” dev portfolio** (structural direction — bold declarative headlines, numbered sections, pill-tag stacks).

4.1 Color System — Blue-Orange Theme

Token	Color	Usage
--brand-primary	Indigo/Iris Blue #5B4FE9 (≈ blue-violet from reference hero)	Hero background, primary buttons, links, section labels
--brand-accent	Warm Orange #F5A623	CTAs (“Download CV”, “Contact”), highlight chips, active filter tab
--surface-light	Off-white #FFFFFF / #FAFAFA	Section backgrounds (About, Services, Projects)
--surface-muted	Light Gray #F4F4F7	Card backgrounds, alternating sections
--text-primary	Near-black #1A1A1A	Headlines
--text-secondary	Slate Gray #6B6B7B	Body copy
--accent-lime (borrowed sparingly)	#D4F550	Small “available for work” status dot / hover states only — not a base color

Typography: One bold, slightly condensed display sans for headlines (mirrors the oversized “I BUILD. I BUILD. I TEST.” treatment) + a clean grotesque for body text. Headline weight should carry the same confidence as the reference — short declarative lines, not paragraphs.

Signature layout pattern (from Montgomery reference):

numbered section labels (01, 02, 03) with a thin dotted divider, a short one-line description, and a right-aligned row of **pill-shaped tag chips** for tools. This becomes the pattern for the “What I Work With” / capability sections below.

4.2 Component Patterns to Reuse

- **Rounded pill tags** (e.g. TYPESCRIPT REACT VUE chips) -> used for every tool/tech mention across the site.
 - **Colored highlight blocks behind key words** (yellow/lime boxes behind "FRONT." "BACK." "EVERYTHING.") -> used once in the hero to punch the 3 pillars: **Analytics / Engineering / Automation**.
 - **Numbered horizontal capability rows** (Frontend/Backend/Testing pattern) -> reused as **Analytics / Engineering / Applications / Automation** rows.
 - **Circular "process" steps with connecting arrows** (Business Planning -> Design Strategy -> Grow Business) -> reused as **How I Work**: Understand the Problem -> Build & Validate -> Ship & Document.
 - **Filterable portfolio grid with pill tab filters** (All / Landing Page / App Design / SaaS / Dashboard) -> this is the exact pattern for the **Projects section**, retargeted to Sonu's categories.
 - **"About Me" split layout** (photo left, stat callouts right, CV download button) -> reused for the About section with stats like "2 Years Experience," "75,670+ Records Validated," "45+ Projects."
 - **Footer CTA + subscribe-style block** -> repurposed as a **Contact + "Let's Talk" + newsletter/blog-updates opt-in** for future articles.
-

5. Site Architecture (Sitemap)

Home (single scrolling page, deep-linkable sections)

```
+-- Hero
+-- What I Work With (capability pillars)
+-- About Me
+-- Experience (timeline)
+-- Projects (filterable, categorized, expandable)
+-- How I Work (process)
+-- Certifications
+-- Contact / Footer
```

Single-page for v1 (matches reference sites), but **every section and every project has its own stable route/anchor** (/projects/contract-intelligence-dashboard) so it scales into a multi-page site later without restructuring URLs.

6. Project Repository Structure

The codebase should follow a data-driven structure so new projects, certifications, or sections can be added by editing data files, not layout code — directly supporting the expandability requirement in Section 9.

```
portfolio/
|
+-- src/
|   +-- components/          # Reusable UI: capability rows, project
|   cards, filter tabs, timeline items
|   +-- pages/              # Route-level views (Home, individual
|   project case-study pages)
|   +-- data/
|   |   +-- projects.js      # Single source of truth: every project
|   |   as structured data
|   +-- assets/             # Screenshots, icons, images
|
+-- public/                 # Static files (favicon, resume PDF,
robots.txt, etc.)
```

```

|
+-- context/
|   +-- prd/                # This PRD and future iterations
|   +-- inspo/              # Reference screenshots used for
design direction
|
+-- README.md
+-- package.json

```

Notes on how this maps to the PRD: - data/projects.js is what makes Section 7.5 (filterable Projects grid) scale to dozens of entries — each project is an object with title, category, tier (Professional/Project/Practice/Exposure), tools[], outcome, thumbnail, and link. Adding a project is one new object, no new components. - components/ should include a generic ProjectCard, FilterTabs, CapabilityRow (for the numbered “What I Work With” pattern), and TimelineItem (for Experience) — all driven by props/data, not hardcoded copy. - context/inspo/ keeps the reference screenshots (Montgomery, blue-orange template) inside the repo so design decisions stay traceable back to source inspiration as the site evolves. - context/prd/ keeps this document (and future revisions) versioned alongside the code it describes.

7. Section-by-Section Requirements

7.1 Hero

- Headline pattern borrowed from Montgomery’s declarative style, reworked: **“I Analyze. I Build. I Automate.”** with “AUTOMATE” (or the strongest word) punched in an orange/lime highlight block.
- Subheading: one-line positioning statement (Section 2).
- Primary CTA: Download CV (orange button). Secondary: See Projects.
- Small live-status chip: “Open to Data / BI / Engineering roles” with a pulsing dot (borrowed from lime accent).
- Photo optional — if used, styled like reference (circular crop, soft shadow, floating stat badge e.g. “45+ Projects”).

7.2 What I Work With (Capability Pillars)

Four numbered rows, each with description + tool pill chips, mirroring the Montgomery Frontend/Backend/Testing block exactly:

#	Pillar	Tools (pills)
01	Analytics & BI	Power BI · SQL · Tableau · Excel (VBA) · Power Pivot · DAX
02	Data Engineering	Python · ETL · AWS Redshift · Apache Spark · PostgreSQL · Snowflake
03	Application Development	Flutter · Spring Boot · JWT · Docker · Kubernetes · REST APIs
04	Automation & AI	Web Scraping Bots · Python Automation · OpenAI APIs · Power Automate

7.3 About Me

- Layout: photo + circular accent ring (reference pattern) + two stat callout cards + CV download.
- Copy angle: “Designing Solutions, Not Just Dashboards” (reworded from reference headline).
- Stats to feature (real, from resume): ~2 Years Experience · 75,670+ Records Validated · 130+ Contracts Analyzed · 45+ Projects Shipped.

7.4 Experience (Timeline)

Reverse-chronological cards, each with role, company, dates, and 2-3 bullet highlights (compressed from resume):

1. **Executive Data Analyst & Customer Service Technical** — Innomotics India Ltd. (Mar 2026–Present)
2. **Data Analyst | Data Platform Developer** — Sounce Retail Pvt Ltd (Feb 2025–Mar 2026)
3. **Data Analytics Intern** — Infotech (Jul–Sep 2024)
4. **Web Development Intern** — Unified Mentor Pvt Ltd (Jan–Feb 2024)

Each card gets a “View related project ->” link where a portfolio project exists for that role (e.g. Contract Intelligence Dashboard, Business Management Platform).

7.5 Projects — Filterable, Categorized, Expandable (core section)

This is the most important section and must directly reuse the “**Digital Product Showcases**” **filter-tab pattern** from the reference (All / Landing Page / App Design / SaaS / Dashboard), remapped to Sonu’s domains:

Filter tabs: All · Power BI · Excel · SQL · Tableau · Python · Cloud/ETL · Application Dev · Automation/Bots

Card anatomy (per project): thumbnail/screenshot, title, one-line outcome (quantified where possible), tech-pill row, tier badge (Professional / Project / Practice), link out (GitHub / live demo / case study).

Initial inventory to seed (from current portfolio + resume), grouped by category:

- **Power BI (10 dashboards)** — incl. Contract Intelligence Dashboard, Installed Base Intelligence Dashboard, Time Entries & Utilization Dashboard
- **Excel Analytics** — 6 completed + 1 ongoing dashboard/tracker project, incl. Daily Run Rate VBA Automation (3,000+ SKUs)
- **SQL** — 3 EDA projects + 19 advanced SQL exercises (grouped as a single expandable “SQL Practice Library” card, not 19 separate cards)
- **Tableau (9 dashboards)**
- **Python Analytics** — 7 EDA/analysis projects + 2 web-scraping projects
- **Power Pivot** — 1 analysis project
- **Application Development** — QR-based iBase Industrial Asset Management app (Flutter, Spring Boot, JWT, PostgreSQL, Docker, Kubernetes); Business Management Platform (Spring Boot, SQL Server, embedded Power BI)
- **Automation / Bots** — Resume Parser Bot, Barcode Generator (Word Mail Merge), Amazon Data Scraper Bot
- **Cloud / Data Engineering** — AWS Redshift + Python project,

Data Lake ETL with Spark, PostgreSQL Data Modeling (Python + SQL), Python Data Wrangling, Flights AWS ETL Pipeline, Amazon Mechanical Keyboard Scraping project

Scale requirement: the grid must support dozens of cards without feeling cluttered — use pagination or “Load more” beyond ~9 cards per filtered view, matching the reference’s 6-per-view density.

7.6 How I Work (Process)

Three-step circular process row (reference pattern), reworded:
Understand the Data/Problem -> Build, Model & Validate -> Ship, Document & Iterate

7.7 Certifications

Simple badge row: Google Data Analytics Certificate · PL-300 (In Progress) · Python for Data Science (NPTEL) · SQL for Data Science

7.8 Contact / Footer

- “Got a project or a role in mind? Let’s talk” CTA block (orange, reference style).
 - Direct contact: email, phone, LinkedIn, GitHub.
 - Optional future: “Get notified when I publish a new project” subscribe field (reuses reference’s subscribe block) — supports the “articles / technical write-ups” future-expansion goal.
-

8. Content Rule: Portfolio ≠ Resume

The site must **never just restate the resume**. For every resume bullet used, the site should link to or expand into: the actual dashboard/screenshot, the business problem, the technical approach, and the outcome — evidence, not just claims.

9. Non-Functional / Architecture Requirements

1. **Expandability is a hard requirement.** Adding a new project, certification, or experience entry must not require touching layout code — data-driven cards (JSON/CMS-backed) per project.
 2. **Category taxonomy is fixed but extensible** — new categories (e.g. “AI/ML,” “Enterprise Systems”) can be added to the filter bar without redesign.
 3. **No dead-end pages** — every project card resolves to a real destination (repo, live demo, or case-study write-up), never a placeholder.
 4. **Enterprise-credible visual bar** — professional enough for enterprise recruiters despite the vivid palette; avoid template-generic Lorem Ipsum polish, avoid looking exclusively like a designer/frontend portfolio.
 5. **Responsive** — capability rows and filter grid must collapse cleanly to mobile (stacked cards, single-column pill wrap).
-

10. Explicit Non-Goals (v1)

- Not a multi-page CMS-driven blog (structure should *allow* it later,

not build it now).

- Not attempting to claim “expert” level in exposure-only technologies (Snowflake, Azure) — these stay labeled as Technical Exposure.
 - Not a generic template reskin — reference sites are for **pattern and palette inspiration only**, not literal reuse of their copy or stock imagery.
-

11. Open Items for Next PRD Iteration

Per the original PRD, the following will be layered in once supplied: - Actual project screenshots/GitHub links per project - Final copy for each capability/about section - Confirmed final color hex values + font pairing - Decision: single-page vs. multi-page architecture for v2
